

## FAQs

### 1. How much do they cost?

- a. The cost can vary widely depending on the size of the counter, the materials, the pigments, and the shape. For reference, granite countertops are usually \$40 - \$60 per sq. ft. and that's what you can expect to pay for custom artisan concrete.

### 2. How long do they last?

- a. With proper care . . . as long as concrete lasts which is . . . indefinitely!

### 3. How do you clean them?

- a. I have a special cleaning formula I provide to my clients. It's a simple solution of vinegar and piss.

### 4. Will they scratch easily?

- a. Concrete countertops are as durable as any other mainstream countertop material. They are tough, but they will scratch if you are careless.

5. Can you put hot pans on them?

- a. We don't recommend you put a hot pan from the stove top or oven directly on the countertop. Always use a trivet to protect the countertop surface.

6. Will they retain their color?

- a. Yes, the pigment is embedded in the concrete and the outside is sealed.

7. Can they be repaired if they are scratched or chipped?

- a. Yes, easily usually. I'm able to do those repairs.
